

00

**A landing page
used to** *cost \$15,000*

01 · AI LANDING PAGE

**Type what you
want. Get a
landing page *in
seconds.***

Aura.build creates production-ready landing page designs in seconds. You type what you want. It generates the layout, typography, color system, and responsive behavior. Then exports to HTML and Figma.

02 · COST TIME COMPA

**2–4 weeks and
\$5K–\$25K
becomes *60 seconds***

The average agency charges \$5,000 to \$25,000 for a single landing page with a 2–4 week timeline. Aura.build delivers comparable output in under 60 seconds. The cost difference is not incremental. It is categorical.

COST TIME COMPARISON

03 · DESIGN BLANK CA

Skip 60–70% of design time: the blank *canvas phase*

Figma exports mean designers can still refine the output. This is not about replacing designers. It is about skipping the blank canvas phase that takes 60–70% of total design time on any project.

04 · CONVERSION OPTI

Trained on conversions, not *just aesthetics*

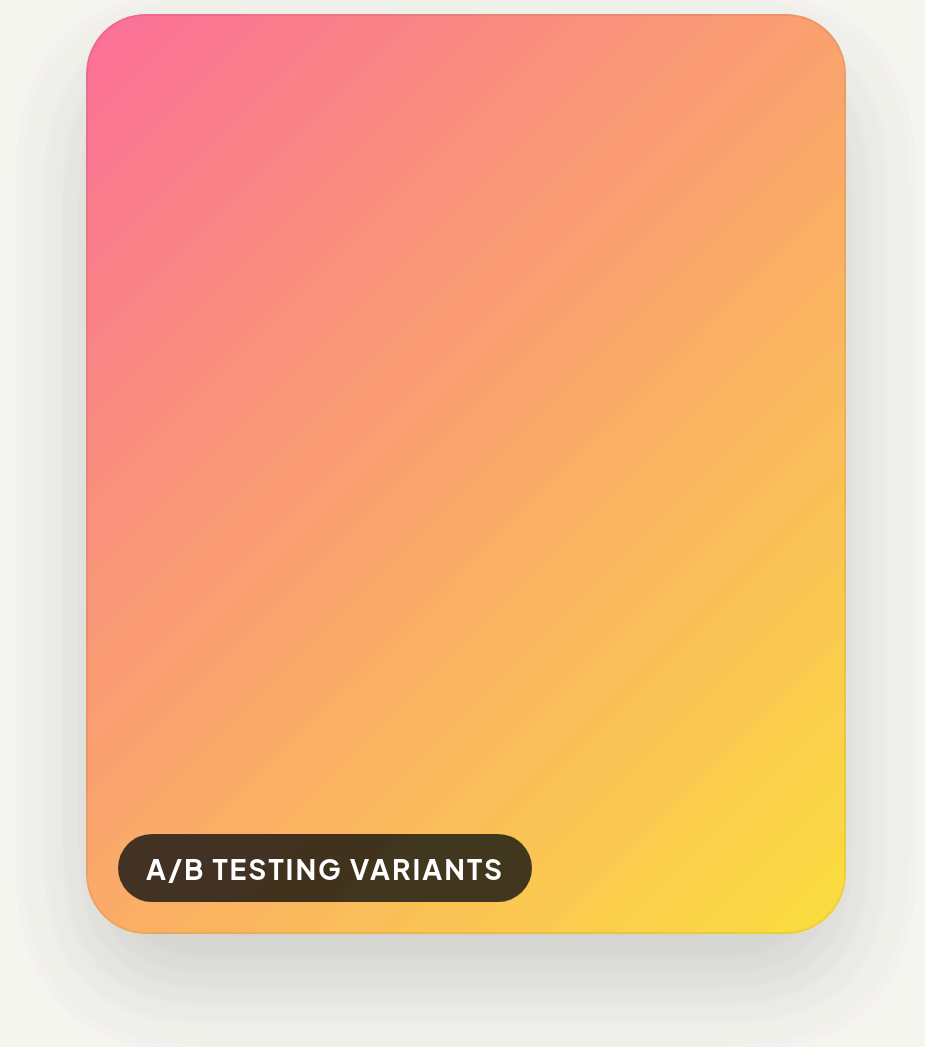

Aura.build is trained on high-converting landing page patterns, not just aesthetics. The designs it produces are structured for conversion: clear hierarchy, strategic whitespace, and CTAs placed where they actually get clicked.

05 · A/B TESTING VAR

5–10x more A/B test variants at near *zero cost*

Early users report launching 5–10x more landing page variants for A/B testing because the cost of creating each variant dropped to near zero. More experiments, more data, faster optimization cycles.
