# 1 Markdown File Replaces 47 *Config Files*

MARKDOWN FILE DESIGN

01 · DESIGN TOKENS M

# Your design system is trapped *in Figma*

Most design systems are trapped in Figma. AI agents can't parse them, so every AI-generated UI gets your brand wrong. Refero Styles puts your entire design language into one DESIGN.md file. Colors, type scale, spacing, components. All machine-readable.

02 · AI AGENT READIN

# 12x faster than Figma *API responses*

AI agents process structured markdown 12x faster than Figma API responses. Your coding assistant already speaks markdown fluently. When you feed it design tokens as plain text, you skip the translation layer entirely.

AI AGENT READING MAR

03 · DESIGN SYSTEM S

# Everything in one typed *schema*

A typical DESIGN.md holds 6 color primitives, 8 type scale steps, a 4px spacing grid, and 15–20 component schemas. That's enough for any AI agent to build pixel-accurate UI without guessing.

04 · DESIGN DEVELOPM

# 3x fewer design– dev handoff *cycles*

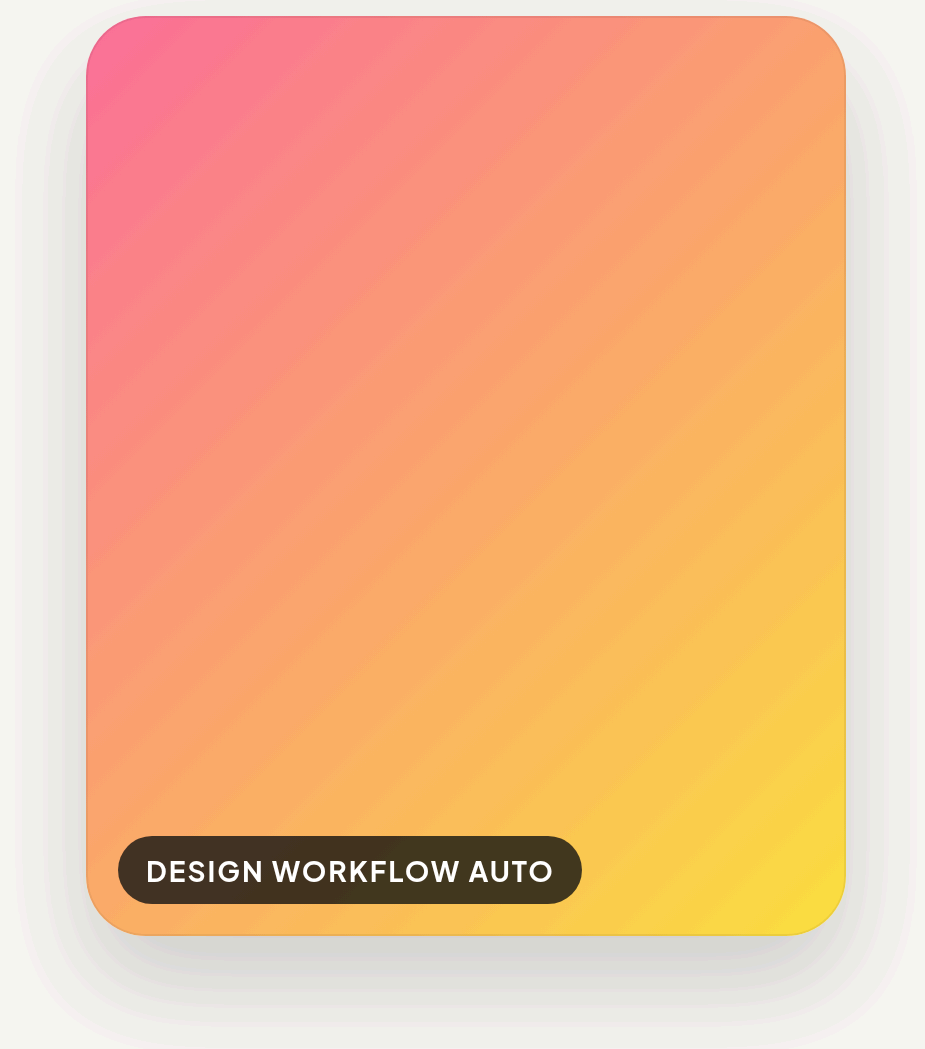

Teams using AI-readable design tokens report 3x fewer handoff cycles between design and engineering. The reason is mechanical. Remove the human middleman and sync happens at machine speed.

DESIGN DEVELOPMENT H

05 · DESIGN WORKFLOW

# Old path vs new *path*

Old path: designer exports tokens, developer copies them, tokens drift apart by week 2. New path: designer updates DESIGN.md, AI reads it in 200ms, every component reflects the change immediately.

# Follow me for 30 days of AI tools that actually change how you work.
