

00

4 Minutes. 1 Prompt. 1 *Full Website.*

01 · AI GENERATED WE

One prompt. Complete brand *system.*

I tested 10× last week. Typed a one-line description of a SaaS product and got back a sitemap, wireframe, style guide, and 6 fully designed pages in under 4 minutes. Not a template. A custom layout with a coherent brand system.

02 · AI SITEMAP WIRE

Plan first. Design *second.*

10x works differently from other AI website builders. It generates a structured plan first. Site map with 8–12 pages. Wireframe for each page. Color palette and type system. Only then does it produce the actual design. This planning step is what separates decent from production-ready.

03 · MARKETING TEAM

7x faster than traditional *agency workflows*

Marketing teams using AI builders ship landing pages 7x faster than traditional agency workflows. A campaign that used to take 3 weeks now takes 2 days. The creative strategist focuses on messaging while AI handles layout execution.

MARKETING TEAM AI SP

04 · DESIGN SYSTEM S

Exportable style guide *included*

The style guide output is the real unlock. 4 primary colors, 2 fonts, button variants, spacing tokens. Everything documented and exportable. Your AI-generated site doesn't just look good on day one. It stays consistent as you add pages.

05 · FOUNDER VALIDAT

Validate ideas before writing *code*

Here's what this means practically.
Founders can validate product ideas
with real websites before writing code.
Marketing teams can test 5 landing
page variations in an afternoon.
Agencies can deliver first drafts while
the client's still on the discovery call.
